

RADIATOR COVER

ABSTRACT OF THE DISCLOSURE

5

An easily removable protective radiator cover assembly having easily replaceable filtering material for protecting an air-cooled radiator. To attain this, a frame hanging on an air-intake radiator side receives a slidably mounted, filtering material accommodating screen case. In an embodiment, a hanging frame having a horizontal bottom section extending across the radiator and a pair of vertical, side sections extending from each end of the bottom section; a
10 filtering-material-accommodating screen case, slidably mounted within the frame and resting upon the bottom section; and a pair of frame extensions affixed to and extending from the frame to the radiator top.
